

DuO Bridge and Tunnel

DuO Bridge and Tunnel

A flexible waterproofing membrane with a dual reinforcement and a double polymeric bitumen coating. DuO Bridges & Tunnels is the Duo Flexible waterproofing membrane especially designed to be used for infrastructure works

The membrane has the same composition as Duo High Tech but comes with an extra strong composite reinforcement in the middle. It has a special granular protection to resist site-traffic.

Concrete and asphalt layers can be directly applied on top of the membrane without the need of an additional protection layer. It is extremely strong and is used where there are extra high demands on strong waterproofing membranes such as is the case for open cut tunnels, bridges and car parking decks.
